

Attention Developers in Canada and USA without a Lender or Equity Partner!

We are now working with a Direct Lender that specializes in most types of Energy Projects that are located in the USA and Canada only, and require a minimum of \$20M USA.

They expect all Borrowers to have a minimum of 20% Equity into their projects, (that's where we also come into play for you)

Below is what they want to fund:

Our Key Areas of Focus in USA / Canada:

Power

- **Power Plant Construction and Acquisitions**
- **Energy Infrastructure**
- **Conventional and Renewable Power**

Energy Services

- **Oilfield Services**
- **Equipment Manufacturers**

Midstream

- **Transmission**
- **Gathering & Services**
- **Storage**

Exploration & Production

- **Oil and Gas Production Financing**

[**Apply For Funding**](#)

If your Project falls within their areas of interest, and would like for us to make the introduction, contact us to discuss things over.

This Option will only cost You a small introductory fee of \$6,000 USD that you can write-off at the end of the fiscal year as a Business Expense for your company.

This fee will be due after this specific funding source has reviewed your project and knows that You also will bring enough Collateral/Guarantees from our Equity Investing Firm to help your project get financed.

Again, this is just an Option for your consideration!

You are under no obligation to transact with us under these conditions.

If you have your Own Lender or Bank that would provide a Commitment Letter, willing to fund your project, once they understand that we will provide the Equity for you, then you don't need to pay us any fees.

We will simply need the Letter of Commitment from the Funding Entity and of course that you will need our Equity Firm to partner with you.

If you like to proceed with our Funding Source for Energy Projects and can afford the small \$6K Investment Fee, Please contact me and make sure that you mention this option when we communicate.

Thank You.
